

VANGUARD VACUUM LIFTER

VACUUM LIFTERS
VL10, VL12, VL16

VANGUARD VACUUM LIFTER

VANGUARD VACUUM LIFTERS are self-contained lifting devices powered by a diesel engine and capable of lifting loads up to 16 tonnes (35,275 LB). Easier hook-up to excavators and pads allows you to be ready to work quickly. Large vacuum reservoir combined with efficient pump ensures fast pipe handling. Multiple safety devices will help create an accident-free work environment and protect the load against any damages.

HIGHLIGHTS:

- **ENGINEERED TO LAST** - meets or exceeds ASME B30.20 and ASME BTH-1 specifications
- Pad attachments allow lifting pipes from 4 inch (102 mm) to 48 inch (1219 mm) nominal diameter
- Two-stage filtration system - heavy duty vacuum pre-filter greatly extends life of all vacuum-intake filters and vacuum components, especially in dusty environments
- Neatly organized electrical system with central distribution and dedicated wiring harness for easy troubleshooting and repairs
- Robust Deutsch electrical connectors ensure reliable operation in the most demanding environments
- Wireless remote controller provides safe operation from a distance
- Precise load positioning is achieved by improved hydraulic rotators with high braking capabilities on all Vanguard Vacuum Lifters models
- Visual and audible safety devices quickly warn personnel of insufficient vacuum level
- Dedicated "SAFE TO LIFT" green-beacon signals all personnel when the Vacuum Lifter is ready to lift
- Pads do not damage pipe coating
- Pipes can be stored without the need for spacers
- Possible to lock out Vacuum Lifter against theft or vandalism
- Easy and fast connection between Vacuum Lifter and Pads
- Lifter-mounted Stowing legs and transport tubes aid in handling Vacuum Lifter and Pads, no need for extra frames or worrying about seal damage from the ground
- Larger vacuum-tank provides faster recovery time at high elevations

IMPROVEMENTS AND ADVANTAGES OF VANGUARD LIFTERS:

SAFETY:

- Built to the highest safety standards: meets or exceeds ASME B30.20 and ASME BTH-1 specifications. Designed to Design Category "B" and Service Class "2" with substantially higher number of cycles: between 100,000 and 500,000 for greatly improved safety and reliability over majority of similar units, which are typically Service Class "0" designed for 0 to 20,000 cycles.
- Extensive Vacuum Lifter and Pad Attachment testing, exceeding US required standards ensures safe load holding capability.
- High visibility dual safety beacons, and an audible alarm indicate both safe, and hazardous lifting status.
- Both US and international safety decals designed according to ISO standards identify potential hazards to English and non-English speaking personnel.
- Detailed Operation and Maintenance Manual explaining potential hazards and safe operation. Manual is conveniently stored inside Vacuum Lifter in a sealed tube. Electronic version is also easily downloaded from our website.
- Large, intuitive Operators Panel with complete lockout function for safe storage and prevents unauthorised start-up during maintenance.
- Locking key-start makes it possible to completely lock out Vacuum Lifter against theft or vandalism.
- Integrated foldable pad stand legs and forklift sockets allow for easy storage and moving pad attachments without destroying the seal. Pads are stored seal-down to extend seal life due to minimizing UV exposure. See "Storage" on page 5.

Vacuum lifter and pad attachments extensive testing. 049-55-55-041A

Dual safety beacons, green and amber, enhance safety. 049-55-63-023A

Placement of Seal Insertion Tool and Operation and Maintenance Manual. 049-08-08-002A

Operator control panel with doors closed. Lockout is accessible only with doors open for improved safety. 049-50-63-001B

LOAD HANDLING:

- Larger vacuum-tank than most competitors provides faster recovery time when repetitively handling large loads or when working at high elevation.
- Precise load positioning is achieved by improved, proprietary hydraulic rotator with high braking capabilities on all Vanguard Vacuum Lifters models, addition of precise flow controllers allow fine-tuning rotation speed.

Large tank preserves vacuum level better when working repetitively and at high altitudes. 049-05-05-032B

Proprietary hydraulic rotator with high braking capabilities and clean hydraulic connection. 049-42-60-003A

Positioning is very easy even with long and heavy pipes. 049-05-05-033A

FILTRATION:

- Two-stage air filtration system: heavy duty vacuum pre-filter significantly extends life of all vacuum-intake filters by removing most of the dust-particles, especially in dusty environment. Final intake-filters stop the very small particles to protect all critical vacuum components. This results in longer life of components and much less down-time.
- Oversized diesel fuel-filter helps engine run longer without fuel system problems.

Large air pre-filter.
049-55-035A

Oversized diesel fuel filter. 049-50-50-015A

Dusty conditions are not an issue for Vanguard Vacuum Lifters. 049-05-05-034B

ELECTRICAL:

- Clean and neatly organized electrical system with central distribution and dedicated wiring harness with Deutsch connectors for better resistance to vibration, moisture and dust. Simplified design makes for easy troubleshooting, repairs and improved reliability. All components, together with spare fuses, are locked in a safe polycarbonate enclosure.

Electrical enclosure is easily accessible for diagnostic and troubleshooting. 049-50-63-003A

Schematic: inside view of electrical enclosure.
049-40-40-001A

STORAGE:

- Integrated, foldable tank stand legs allow stowing the unit with pads attached, without the need of carrying an additional large and heavy support frame. Simple operation requires pulling out pins and flipping legs up out of the way.
- Integrated foldable pad stand legs and forklift sockets assist with pad storage and manipulation, reducing the risk of damaging the seal.
- Storage for Operation and Maintenance Manual and Seal Insertion Tool is inside safety doors, meaning it is always available on the job site, see page 2.

Tank stand legs in parked position for overnight storage.

Tank stand legs folded up for working. 049-05-05-035B

049-05-05-009B

Pads stored on stand legs with seal in the shadow. 049-05-05-036A

ENVIRONMENTAL:

- Eco oil drain hoses for all components, and diesel fuel tank drain speed up maintenance and keep machine and environment clean.

Drain hoses are bundled together. 049-50-50-014A

Drain hoses are operated by hand valve. 049-42-55-001B

PIPE WEIGHT QUICK REFERENCE

Instructions: Refer to Table 1 for pipe weight per foot (lbs/ft) using the pipe size and pipe wall thickness. To calculate pipe weight (W), multiply pipe weight per foot by pipe length in feet (L); $W=(\text{lbs/ft})*(L)$. Check pipe weight against the maximum lifting capacity by vacuum pad size and altitude at working environment in Table 2. Contact Vanguard for special-order Vacuum Pads if the pipe is too heavy for the rated load in Table 2.

Table 1: Pipe Weight per foot by Pipe Size¹

Table 2: Maximum Lifting Capacity in pounds by Vacuum Pad Size and Altitude at Working Environment

Atmospheric conditions can vary, use for quick reference only. Refer to the Operator and Maintenance manual for procedures to determine actual Load Capacity/WLL based on achievable vacuum level.

Pad size	0 - 5,000 [ft]	6,000 [ft]	7,000 [ft]	8,000 [ft]	9,000 [ft]	10,000 [ft]	11,000 [ft]	12,000 [ft]	13,000 [ft]	14,000 [ft]	15,000 [ft]	16,000 [ft]	17,000 [ft]
4	1,055	1,023	984	947	911	876	842	809	778	747	717	688	660
